

SANITARY SEWER OVERFLOW

Is a condition whereby untreated sewage is discharged into the environment, escaping water treatment.

The main causes are:

- * Infiltration of excessive storm water into sewer lines during heavy rainfall
- * Rupture or blockage of sewer lines
- * Malfunction of pumping station lifts, equipment or electric power failure.
- * Human operator at treatment plant facilities.

For what ever reason,
you need to know about it fast.

The *WIRELESS* Tbox will:

- * Text Message your cell phone

The Tbox has four digital and two analog alarm inputs that will send a text message to you or any selected cell phones, not some service. You determine the message. The inputs can also transfer up to four industrial relay contacts. It also has a timer to allow the proper person to be called in evenings or weekends.

- * Lets you call it

With the latest GPRS technology, the Tbox will allow you to interrogate the inputs (analog and digital) and outputs. You can change its settings for alarm, cell phone number through your cell phone even if you are miles away or across the country.

- * Compatible with old or new systems

The Tbox accepts contact that open, close or transition. It accepts standard 4-20 mA or 0-5 vdc analog inputs. Use it in conjunction with your existing system and be advised almost instantly, 24/7 of the condition of your lift stations.

- * Don't wait for your customers to call you about your problem.
